**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 2-22 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach that, a first radiation unit formed in a band shape with a designated width having one end connected to the power feed unit and another end connected to the ground unit arranged along an edge of an upper surface of the dielectric support unit so as to form a loop shaped current path and radiating at a designed low frequency band when a current is introduced to the power feed unit and a second radiation unit formed in a band shaped with a designated width connected to an inner side of a left radiation unit of the first radiation unit arranged on the upper surface of the dielectric support unit and radiating at a designated high frequency band when the current is introduced to the power feed unit in combination with all limitations recited in independent claims 4,9.

The prior art does not teach that, a first, elongate radiation element resonating at a first frequency band when the antenna is powered via said power terminal, wherein said first radiation element is formed on said dielectric support and has opposite ends connect to the power and ground terminals to form a current path between said terminals, said current path having a shape of an open loop; and a second elongated radiation element resonating at a second frequency band higher than the first frequency band when the antenna is powered via said power terminal, wherein the second radiation element is a branch connected to a middle section of the open loop of

the first radiation element in combination with all limitations recited in independent claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Vance (US 2004/0252061 A1) and Braun et al (US 6,392,610) are cited to show an antenna device.
